

# Wood workshop

- There must be at least two people in the workshop when operating equipment in case accidents occur. Both people need to have completed the general safety course.

If bringing another T-RAX member without the metal safety course into the workshop you are responsible for them while inside the workshop and for briefing them on the following:

- emergency stops
  - appropriate clothing and safety equipment
  - machine-specific safety routines
  - what machines they can use and which they can't
- Members without the wood specific safety course are not allowed to use machines but are allowed to use non-electric handheld tools.
  - Members without the metal-specific safety course are not allowed to use machines but are allowed to use non-electric handheld tools.
  - Long sleeves, loose clothing, jewelry, and similar loose sitting equipment are not allowed when operating rotary equipment. Either roll up your sleeves or do not use anything with sleeves.
  - Safety glasses and hearing protection must be worn when a machine is in use.
  - Pants covering the knees must be worn.
  - Long hair should be put up when in the workshop.
  - Members need to use safety shoes with steel toe caps when in the workshop
  - Members are not allowed to bring chemicals into the wood workshop.
  - Be mindful of material use by using scrap pieces when available and possible.
  - Worn-out and damaged drills and other tools should not be thrown out but instead placed in their rightful place and reported in the damage log.
  - Members are not allowed to repair the machines if broken. Instead, report the damaged machine in the damage log.
