

Wood workshop

- There must be at least two people in the workshop in case accidents occur. Both people need to have completed the general safety course.

If bringing another T-RAX member without the wood safety course into the workshop you are responsible for them while inside the workshop and for briefing them on the following:

- emergency stops
 - appropriate clothing and safety equipment
 - machine-specific safety routines
 - what machines they can use and which they can not
- Members without the wood-specific safety course are not allowed to use machines but are allowed to use non-electric handheld tools.
 - Long sleeves, loose clothing, jewelry, and similar loose-sitting equipment are not allowed when operating rotary equipment. Either roll up your sleeves or do not use anything with sleeves.
 - Safety glasses and hearing protection must be worn when a machine is in use.
 - Pants covering the knees must be worn.
 - Long hair should be put up when in the workshop.
 - Members must use safety shoes with steel toe caps when in the workshop
 - Members are not allowed to bring chemicals into the wood workshop.
 - Be mindful of material use by using scrap pieces when available and possible.
 - Worn-out and damaged drills and other tools should not be thrown out but instead placed in their rightful place and reported in the damage log.
 - Members are not allowed to repair the machines if broken. Instead, report the damaged machine in the damage log.
